- URL: <https://ieeexplore.ieee.org/document/6145622>

This article is relevant because it is an in-depth analysis of Monte Carlo Tree Search methods, covering both game and non-game applications. It is a good foundational paper for understanding how MCTS has evolved over time and provides a starting point for studying MCTS. The article is published by IEEE which is a reputable journal and has high number of citations which shows that it has high impact in the research community.

2. Monte Carlo Tree Search: a review of recent modifications and applications

As research in this area continues to evolve, and with the first paper released in 2012, an up-to-date publication on the modifications and applications of MCTS is necessary. Although the paper does not focus solely on Go, it provides insights into the use and implementation of Monte Carlo Tree Search in different games. It is published by *Artificial Intelligence Review*, a peer-reviewed journal by Springer, which is recognized as a reputable source. Also needed a research survey for the assignment.

3. Fuego-An Open-Source Framework for Board Games and Go Engine Based on Monte Carlo Tree Search

- **URL:** <https://ieeexplore.ieee.org/document/5599855>

This article is relevant as it presents a practical, open-source implementation of MCTS, offering insights into real-world challenges and solutions which would most likely be relevant at some point when implementing an MCTS for a masters thesis. It is publication in a peer-reviewed IEEE journal, but the real value is in that it showcases an working open-source version which can be easily studied.
